**HEART ATTACKS:** The Occupational Health Clinic wants to remind employees of the signs of a Heart Attack. All too often employees will have these symptoms at home and drive in to work to have them checked out at the OHF. Please call 911 and get checked right away, do not drive to the Space Center with these symptoms. Valuable time may be lost if you are having a heart attack. "Time is Heart" Some heart attacks are sudden and intense – the "movie heart attack," where no one doubts what's happening. But **most heart attacks start slowly, with mild pain or discomfort**. Often people affected aren't sure what's wrong and wait too long before getting help. Here are signs that can mean a heart attack is happening:

- **Chest discomfort.** Most heart attacks involve discomfort in the center of the chest that lasts more than a few minutes, or that goes away and comes back. It can feel like uncomfortable pressure, squeezing, fullness or pain.
- **Discomfort in other areas of the upper body.** Symptoms can include pain or discomfort in one or both arms, the back, neck, jaw or stomach.
- **Shortness of breath.** This feeling often comes along with chest discomfort. But it can occur before the chest discomfort.
- **Other signs:** These may include breaking out in a cold sweat, nausea or lightheadedness. If you or someone you're with has chest discomfort, especially with one or more of the other signs, don't wait longer than a few minutes (no more than 5) before calling for help. Call 9-1-1... Get to a hospital right away.

For questions or more information about cardiac events or heart disease prevention, please contact Kris Calderon, PhD, CHES at (321) 867-3414 or [Kristine.Calderon@jbosc.ksc.nasa.gov](mailto:Kristine.Calderon@jbosc.ksc.nasa.gov) (TA-E2)

**KSC/CCAFS HEALTH EDUCATION & WELLNESS PROGRAM—CANCER PREVENTION JULY 2004:** The month of July is dedicated to cancer prevention. Scientific evidence suggests that about one-third of the 563,700 cancer deaths in the United States that are expected to occur in 2004 will be related to improper nutrition, physical inactivity, being overweight or obese, and other modifiable lifestyle factors, and thus could have been prevented. Moreover, many of the more than 1 million skin cancers that are expected to be diagnosed in 2004 could have been prevented by protection from the sun’s rays.

This month’s information packet contains important information about cancer significance, common types of cancers, cancer preventive behaviors, and types of cancer screening tests. The packet is available at the following link:

**<http://sgs.ksc.nasa.gov/sgs/sites/other/chs/omehs/occmcd/home/occucontent/CancerPrev-July2004.htm>**

Hardcopies of the packet will also be available at all medical and fitness facilities. If you or your department/organization would like to be added to the monthly packet hardcopy distribution list, please call Kris Calderon at 867-3414. (TA-C2)
